The Conference is organized as the final event of the INEQ Jean Monnet research and information project entitled "Variety of institutional settings and socio-economic inequalities in the process of European integration" and is a joint initiative of the Department of Economics (University of Perugia, Italy), the NIESR (National Institute of Economic and Social Research, London, UK), the IOS (Institute for South-Eastern European Studies in Regensburg, Germany) and the FREN (Foundation for the Advancement of Economics, Belgrade).

There is consensus among economists and policy-makers that rising income inequality within countries has been holding back the recovery. The latest empirical evidence shows that inequality severely amplifies boom-and bust-cycles and, at the meantime, weakens the middle class' income and spending behaviour. The consequence is a more vulnerable economy and a much less robust aggregate demand that, in turn, delays the recovery from the crisis.

In order to design the proper initiatives to break the vicious circle between inequality and weak economic growth it is crucial to identify those driving factors behind inequality and income distribution.

Both institutions and technology have recently been acknowledged as important determinants of such phenomena. However, the channel through which these factors affect income distribution/inequality may be analysed in two different perspectives i) the functional income distribution; and ii) the personal income distribution.

The workshop aims at attracting empirical and methodological contributions on:

1. the different role that labour market institutions, ICT and intangible assets play on functional distribution and labour share movements in the last years, as well as the interplay between these factors and the regulatory setting of the product and labour markets;
2. how changes in skilled labour demand within firms and overall regulatory reforms affect wages, productivity and earnings inequality.

The workshop will be opened by a keynote speaker, Stephen Jenkins (London School of Economics). Other authors will be invited by the Scientific Committee on the basis of the quality and publication records. The workshop will also be the venue to present the outcomes of the J. Monnet INEQ project. The final roundtable is the venue for the discussion of the outcomes and the implication of the project. A side objective of the Conference is to provide an arena in which partnership of high quality scholars could be established in the view of developing international research projects on the subjects of the meeting.
